NAVEEN KANDREGULA

DevOps Engineer

+918790887414 • Hyderabad • https://navi126.github.io/Portfolio1/ • naveenkandregula50@gmail.com

ABOUT ME

DevOps Engineer with 3+ years of experience in DevOps practices, CI/CD pipeline automation, cloud infrastructure management, and container orchestration. Hands-on experience with AWS, Jenkins, Docker, Kubernetes, Terraform, Ansible, Git, and Linux. Skilled in automating build and deployment processes, infrastructure provisioning, application deployment, and troubleshooting. Experienced in managing scalable cloud environments and implementing automation solutions to improve deployment efficiency, system availability, and operational reliability.

EDUCATION

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY

Bachelor of Electronics and Communication Engineering - Pragathi Engineering College — 2019-2023

SKILL

- **Cloud Platform** : AWS (EC2, S3, VPC, IAM, SNS, ASG & ELB)
- **SCM**: GIT, GitHub & BitBucket
- **CI/CD**: Jenkins
- **Containerisation**: Docker
- **Orchestration**: Kubernetes
- **IAAC**: Terraform
- **Monitoring**: Prometheus & Grafana
- **Build Tool**: Maven
- **Security**: Sonar, Trivy & OWASP
- **Scripting**: Bash

WORK EXPERIENCE

Centroid Systems, Hyderabad

DevOps Engineer — **2023-NOW**

- Designed and automated end-to-end CI/CD pipelines using **Jenkins**, integrating Git and **Maven** to automate build, testing, and deployment processes, reducing release time by 30%.
- Provisioned and managed **AWS cloud infrastructure using Terraform**, developing reusable modules to ensure consistent, scalable, and automated infrastructure deployments.
- Containerized applications using **Docker and managed container images** to maintain consistent environments across development, testing, staging, and production.
- Deployed and managed **containerized applications on Kubernetes**, implementing Deployments, ReplicaSets, Services, ConfigMaps, and Horizontal Pod Autoscaling (HPA).
- Implemented **Blue-Green and Canary deployment strategies** in Kubernetes to enable zero-downtime application releases and minimize deployment risks.
- Configured **Prometheus and Grafana** for infrastructure and application monitoring, creating dashboards and alerts to improve visibility and reduce incident response time by 40%.
- Developed and maintained **Ansible playbooks** for configuration management, application deployment, and infrastructure automation, reducing manual configuration efforts by 50%.
- Integrated Jenkins with **Git repositories** and implemented Git branching strategies, including Feature Branching and GitFlow, to streamline code integration and collaboration.
- Integrated **security checks and vulnerability scanning** into CI/CD pipelines to identify potential security risks in application builds and Docker images.
- Monitored Kubernetes cluster performance and optimized CPU and memory resource utilization to improve application availability and infrastructure efficiency.
- Automated post-deployment configuration management using Ansible integrated with Jenkins, ensuring consistent application configurations across environments.
- Troubleshot CI/CD pipeline failures, Docker container issues, Kubernetes deployment problems, and Linux system-related issues to maintain application reliability.
